PeopleKey

Finally an Affordable Solution to Track Student Attendance

Tracking student attendance no longer has to be time consuming and costly! The PeopleKey Student Attendance Tracking solution is a cost effective and innovative system that will save time and increase security while providing teachers more time to focus on their students.

How does it work?

Utilising the latest biometric technology, the system simply scans the students finger to confirm their identity. Every students finger scan is unique to them which makes it impossible to scan on behalf of another pupil.

Finger scan details are stored as encrypted numeric values and not an image. Finger scan details are stored in a central database. It's no problem if the network is down as the finger scanners can save the transaction until the connection is re-established.

Once the student identity is confirmed, your school management system can be updated if required, and arrival times stored. Biometric Finger Scanners can be installed in every classroom to track class attendance throughout the day or simply upon arrival and departure.

The finger scanners can also be utilised to trigger doors, preventing unauthorised access to selected facilities or rooms.

Benefits

- Eliminate manual record keeping
- Teachers have more time to focus on students
- Increased security with no administrative overhead

- Biometric finger scanning eliminates fraudulent entries
- Attendance reporting identifies patterns in tardiness
- Heightened information delivery to school and parents

Maintain visibility

Real-time reporting provides teachers and management with detailed attendance data. At the click of a button it's possible to generate a listing of late students or those absent and the duration of the absence. Reports can be run for any period to establish a pattern of tardiness.

Connect a printer and it's possible to produce late slips for parents to sign and return. Late students can be disruptive to classroom learning, making parents aware of frequent tardiness can help reduce these occurrences.

Automation
Manually tracking student attendance can be time consuming and error prone. The PeopleKey Student Tracking System automates the process entirely, saving hours per day and easing the administrative burden.

Increased Security
When integrated with a School Management System parents are automatically sent a text message or an email notifying them that their child hasn't arrived at school.

Talk to us today if you're ready to take your Student Attendance Tracking to the next level.
